SKILLS AND INTERESTS

Field: Construction inspection, Sokkia level/total station surveying, soil sampling and hydrometer analysis, G class driver's license
Soft skills: Excited to learn, Attention to detail, communication with technical and non-technical teams, stakeholder engagement, technical writing, presentation delivery, user-centric design
Technical: AutoCAD, Civil 3D, InfraWorks, R, Python, Power BI, Power Automate, hydrologic modeling, agile, service design
Engineering interests: Environmental rehabilitation, water modeling, process optimization
Passions: Bouldering, sport climbing, weight lifting, cooking

WORK EXPERIENCE

Project Assistant — May 2026 – August 2026

Ministry of Infrastructure – Corporate Management Unit

- Presented technical projects to finance, executive, and technical stakeholders, adapting depth and framing to each audience.
- Developed an R tool for the Infrastructure Modelling and Intelligence Units that matched and cleaned 715 asset records from separate ministry datasets to feed into predictive software forecasting infrastructure needs, informing capital planning and funding decisions.
- Built an automated training database in Power Automate and Power BI, replacing manual tracking of 630 participant records and saving approximately 60 hours annually; refined dashboard measures and layout over rounds of user feedback.
- Authored the business case for adopting Power Automate and Power BI across the unit, covering licensing costs, implementation approach, and projected time savings; approved by management for rollout.

Water Resources Intern — September 2025 – December 2025

Schaeffers Consulting Engineers – Civil Engineering Consultants in the GTA

- Conducted field reviews of mainline water supply and sanitary sewer system installation, proactively resolving issues under tight deadlines to minimize project disruptions.
- Produced functional servicing reports and site plans in Civil 3D.
- Supported the design of stormwater management ponds using Visual OTTHYMO for hydrologic modeling in municipal site plans across the GTA.
- Led the integration of a local large language model (LLM) to streamline report writing for the water resources team, collaborating with external consultants and acquiring new skills rapidly.

HSE Intern — January 2025 – April 2025

Armacell – Engineered Plastics and Foams Manufacturer

- Partnered with acoustical consultants to design a custom noise-reduction enclosure, reducing equipment noise to meet environmental standards.
- Performed on-site performance testing of facility noise levels using a sound meter, compiling data into actionable insights for compliance with Ontario noise regulations.
- Conducted feasibility analysis and coordinated with stakeholders and vendors to draft a closed-loop cooling-water recirculation system for the plant's primary thermoplastic extrusion process.

EDUCATION

University of Waterloo — Expected April 2029

Candidate for Honours Bachelor of Applied Science in Environmental Engineering
Cumulative GPA: 3.7
